Milliken®

An aerial photograph of a tidal estuary, showing a complex network of sandbars, channels, and pools of water. The water has a shimmering, rippled texture, and the sandbars are light-colored, creating a high-contrast pattern. Several small figures of people are visible on the sandbars, providing a sense of scale. The overall scene is a natural masterpiece of fluid dynamics and sediment deposition.

RIPPLE EFFECT

The Ripple Effect Collection draws inspiration from the brackish estuary where fluvial freshwater and ocean tidal forces meet. This percussion of tidal crescendos - saltwater intrusion merging with freshwater aquifers and surface ripples - creates a sophisticated natural milieu design, when viewed from an aerial perspective.

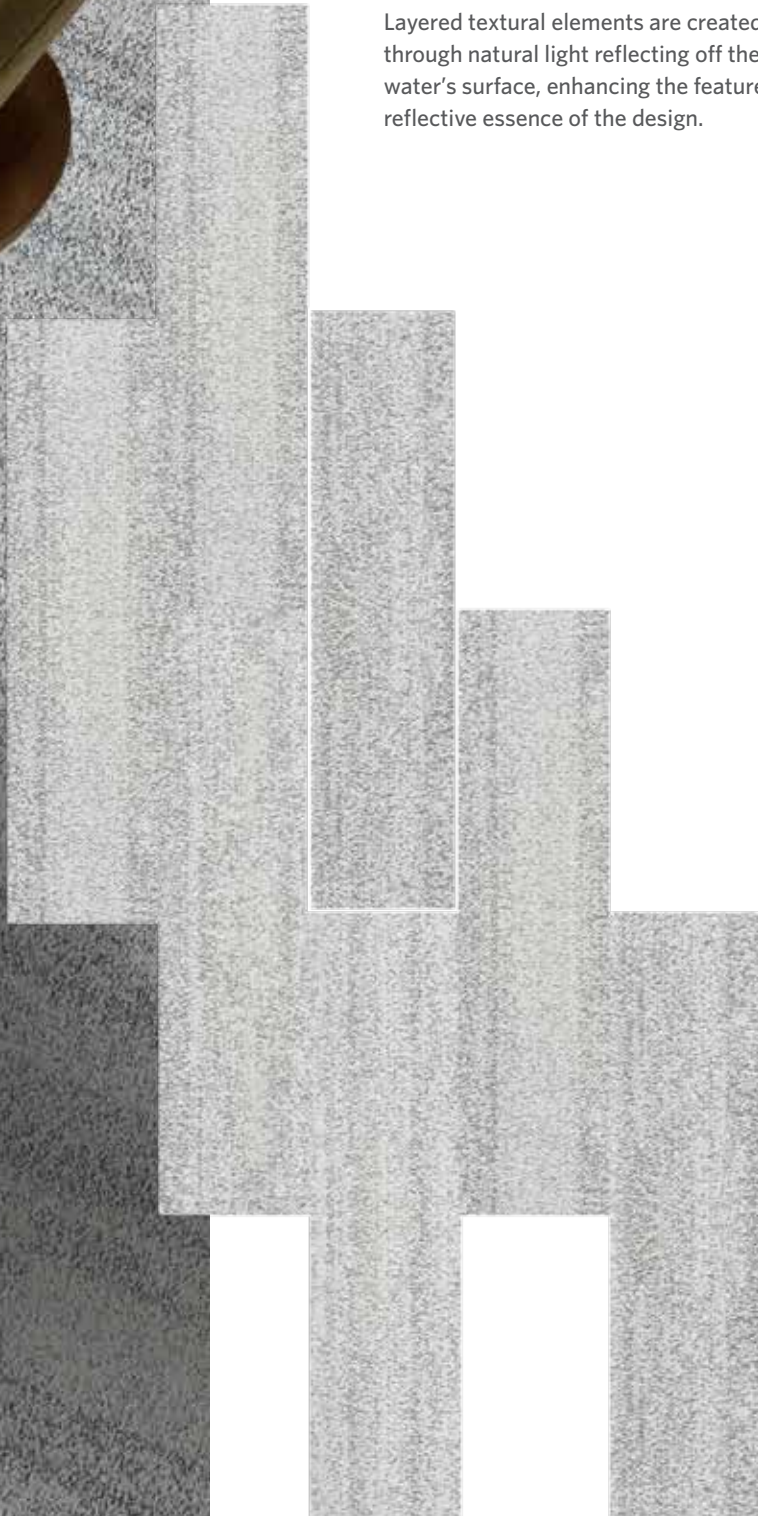

Layered textural elements are created through natural light reflecting off the water's surface, enhancing the feature by the reflective essence of the design. While the underwater motion of the swirl stimulates the soft movement of the ocean bed, formulating increments and the "Ripple" effect.
